SD-WAN AND SECURITY

Calls stay up when a circuit fails

Next generation SD-WAN and firewall from XCLUTEL steers voice onto the healthy path, so one failing link does not take a site offline.

BUILT FOR

- Multi site businesses running voice over the WAN
- Branches needing firewalling and segmentation
- IT teams wanting central policy

Two paths per site

Each site can run two or more diverse links, in any mix of carriers and media.

Voice steered to health

Application aware path selection fails over in under a second. Voice moves to the healthy path, usually without dropping the call.

Security on one box

Next generation firewall, segmentation and inspection run on the same appliance at every branch.

Central policy

Policy is managed across all sites, not box by box. XCLU-Care watches every SD-WAN edge 24×7.

WHAT YOU GET

Everything in SD-WAN and Security

- Two or more diverse links
- Application aware path selection
- Sub second failover
- Voice protection during brownouts
- Bandwidth aggregation
- Next generation firewall
- Segmentation at every branch
- Traffic inspection
- Central policy across sites
- Any mix of carriers
- Pre staged disaster recovery routing
- 24×7 edge monitoring

GETTING STARTED

XCLUTEL handles it, start to finish

1

Design the site

An engineer designs the access and SD-WAN together for each location.

2

XCLUTEL stages failover

Diverse paths, SD-WAN steering and disaster recovery call routing are staged before the first outage.

3

Monitored around the clock

XCLU-Care watches every circuit and SD-WAN edge 24×7 and drives carrier tickets for you.

WORKS WELL WITH

Internet Access and Private Circuits

CloudX

One call, one desk, handled.

Talk to your XCLUTEL rep about a design and quote for your business. Ask about pricing for your setup.
